How to put Human Wonder on your iPhone

A step-by-step guide for testers. You need a Mac, your iPhone and its cable. It is free and takes about 30 minutes the first time. After that, new versions take 2 minutes and no cable.

What you are about to do, in plain words

Human Wonder is not in the App Store yet, so we send it to you as a file called **HumanWonder-iPhone.ipa**. An iPhone only runs such a file once it has been "signed" with an Apple ID, so you will sign it with **your own Apple ID**, free of charge, using three small helper apps:

Helper	Where it goes	What it does
LocalDevVPN	iPhone (App Store)	A switch SideStore needs to install apps. It does not touch your internet traffic.
iloader	Mac (used once)	Puts SideStore on your iPhone through the cable.
SideStore	iPhone	Installs Human Wonder from the file, and keeps it working week after week.

The pictures in this guide are simplified drawings. Your screens may look a little different, but the buttons have the same names.

Before you start: check you have these

☐ An iPhone on **iOS 17 or newer** (Settings → General → About → iOS Version), with **2 GB free**.

☐ A **Mac** and the iPhone's **charging cable**.

☐ Your **Apple ID** email and password. Keep your other Apple device or phone nearby for the 6-digit code.

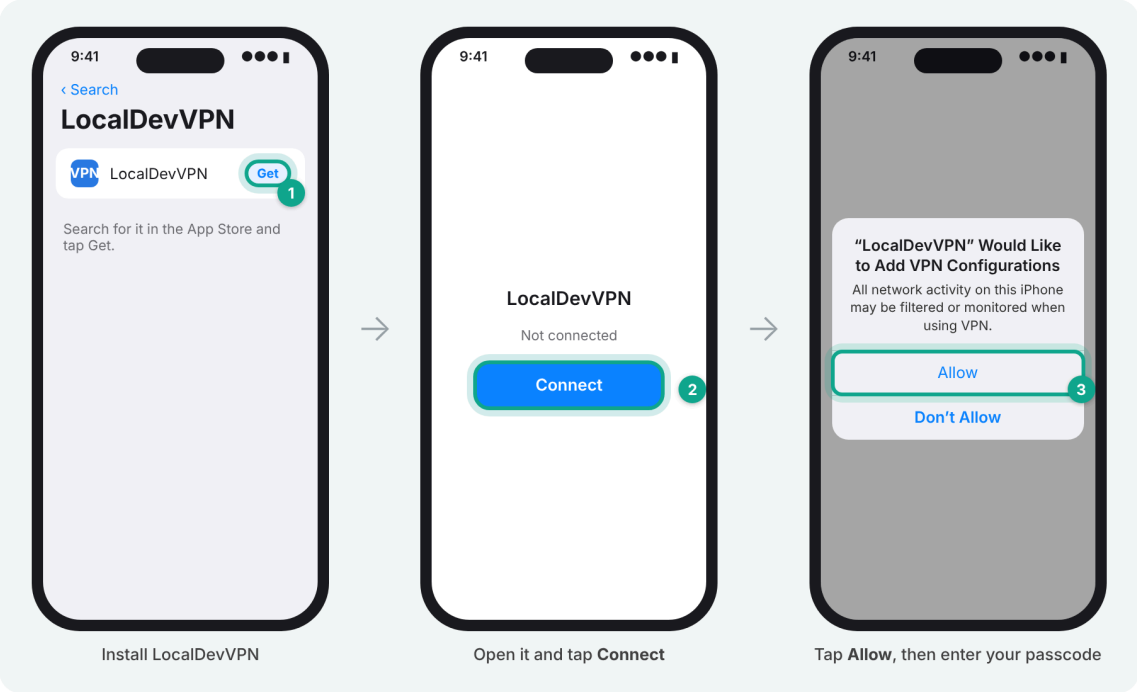

☐ **Wi-Fi** on both the Mac and the iPhone.

☐ The file **HumanWonder-iPhone.ipa** (about 400 MB), from the person who sent you this guide.

Part 1 · On the iPhone (2 minutes)

Step 1 · Install LocalDevVPN and switch it on

- Open the **App Store**, search for **LocalDevVPN**, tap **Get**.
- Open LocalDevVPN and tap **Connect**.
- iPhone asks to add a VPN configuration: tap **Allow**, then type your iPhone passcode.

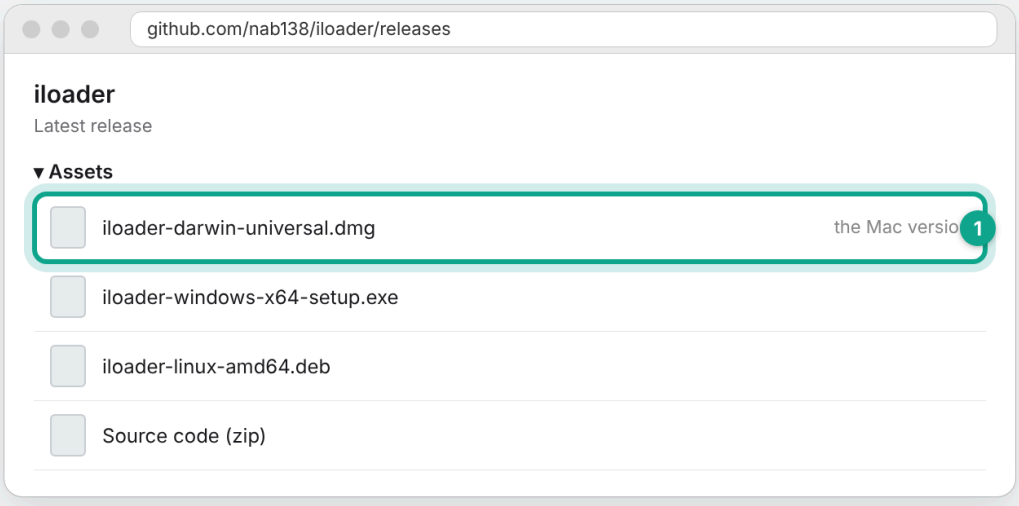

Install LocalDevVPN | Open it and tap **Connect** | Tap **Allow**, then enter your passcode

✅ **It worked when** LocalDevVPN says **Connected**.

Part 2 · On the Mac (10 minutes, with the cable)

Step 2 · Download iloader

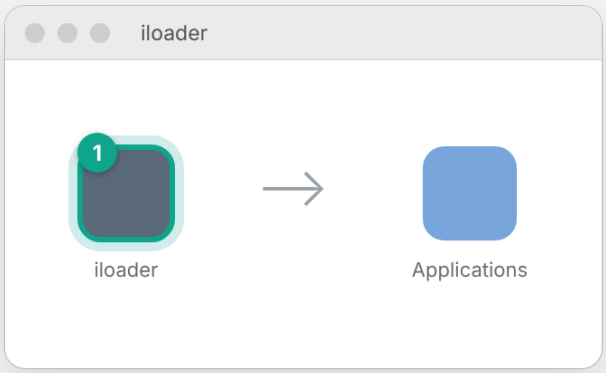

- On the Mac, open Safari and go to **github.com/nab138/iloader/releases**
- Under the newest version, find **Assets** and click the file whose name ends in **darwin-universal.dmg**. It goes into your **Downloads** folder.

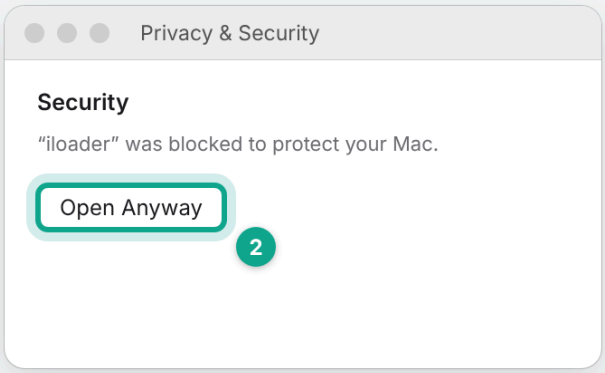

On the releases page, under **Assets**, click the file ending in **darwin-universal.dmg**. File names may differ slightly.

Step 3 · Install iloader and open it

- Open **Downloads** and double-click the file you just downloaded. A window opens.
- Drag the **iloader** icon onto the **Applications** folder.
- Open **iloader** from your Applications folder (or press ⌘ Space, type *iloader*, press Return).
- If the Mac says iloader "can't be opened" or "was blocked": open **System Settings → Privacy & Security**, scroll down and click **Open Anyway**, then confirm.

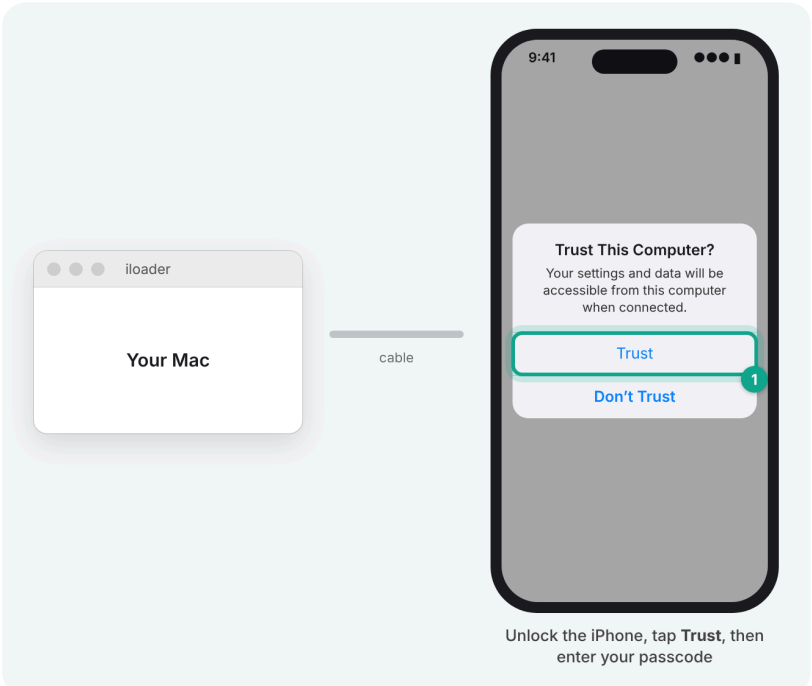

Open the downloaded file and drag **iloader** onto **Applications**

Only if macOS blocks it: **System Settings → Privacy & Security → Open Anyway**

Step 4 · Connect the iPhone with the cable

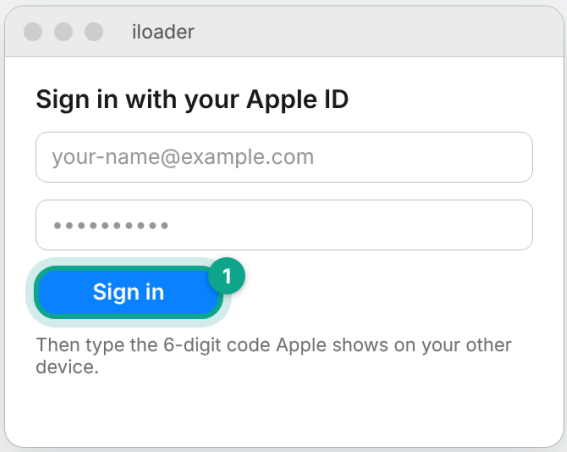

- Plug the iPhone into the Mac and **unlock** the iPhone.
- If the iPhone asks **Trust This Computer?**, tap **Trust** and type your passcode.

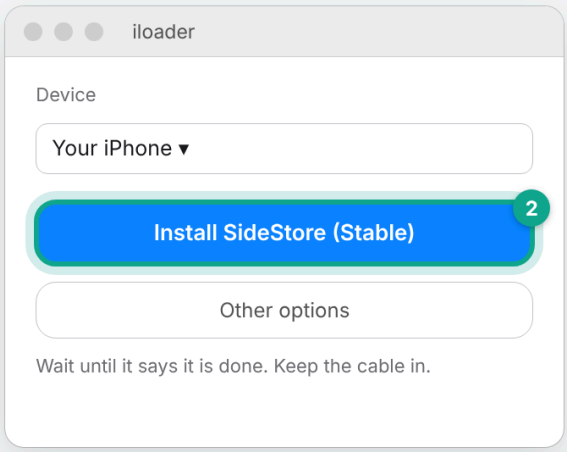

Unlock the iPhone, tap **Trust**, then enter your passcode

Step 5 · Sign in and install SideStore

- In iloader, sign in with **your Apple ID** email and password, then type the 6-digit code Apple sends to your other device.
- Pick your iPhone and click **Install SideStore (Stable)**.
- Wait until iloader says it is **done** (a few minutes). **Keep the cable plugged in until then.**

Sign in with **your** Apple ID

Choose your iPhone, click **Install SideStore (Stable)**

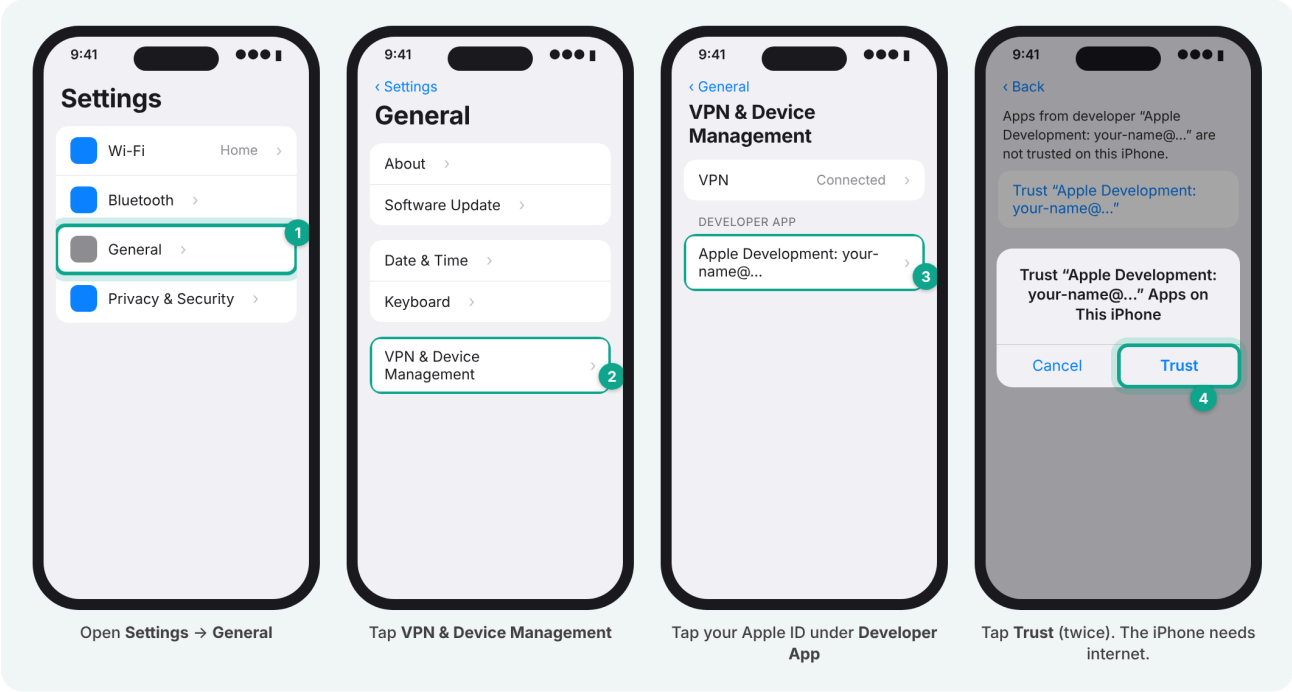

✅ **It worked when** a **SideStore** icon appears on your iPhone's Home Screen. It will not open yet; that is normal and Part 3 fixes it.

Part 3 · On the iPhone: let SideStore run (5 minutes)

Step 6 · Trust your Apple ID as a "developer"

The iPhone needs internet for this step.

- Open **Settings → General → VPN & Device Management**.
- Under **Developer App**, tap the line with your Apple ID email.
- Tap **Trust "Apple Development: ..."**, then tap **Trust** again.

Open **Settings → General**

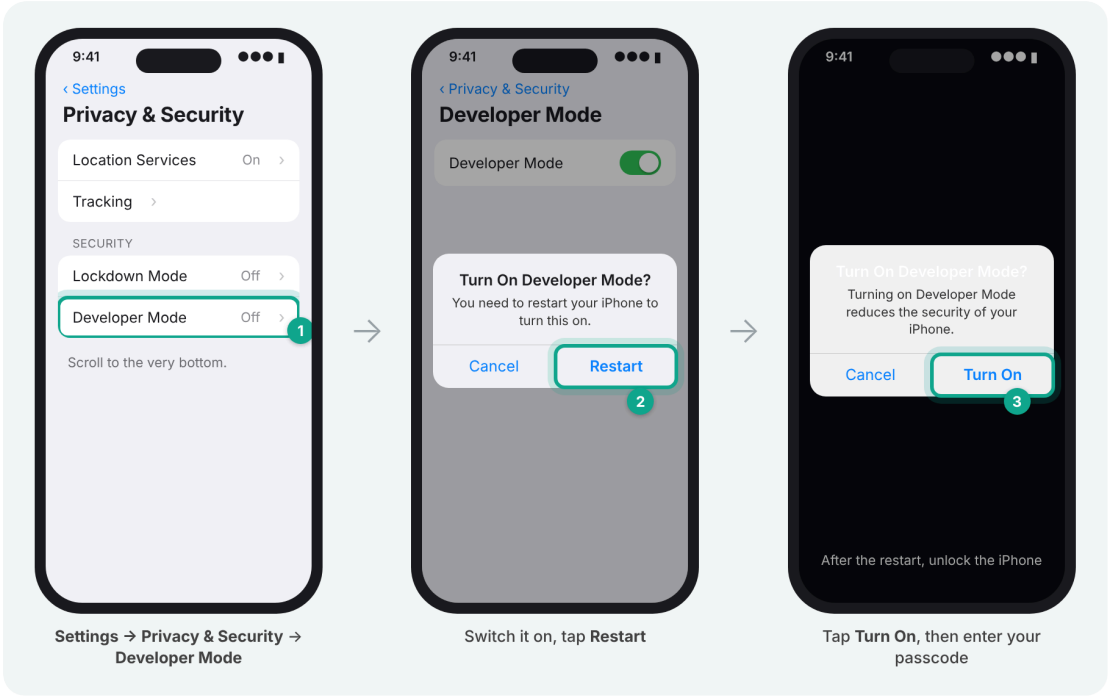

Tap **VPN & Device Management**

Tap your Apple ID under **Developer App**

Tap **Trust** (twice). The iPhone needs internet.

Step 7 · Turn on Developer Mode

- Open **Settings → Privacy & Security**, scroll to the **very bottom**, tap **Developer Mode**.
- Switch it on and tap **Restart**. The iPhone restarts.
- After it restarts, unlock it: a message asks **Turn On Developer Mode?** Tap **Turn On** and type your passcode.

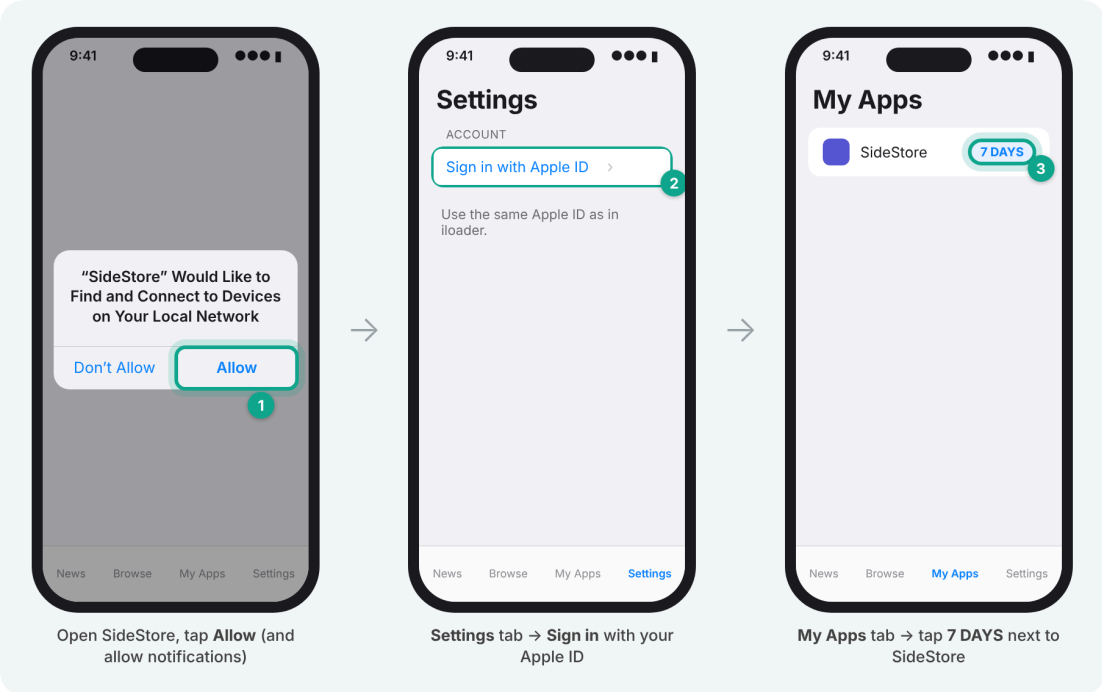

Settings → Privacy & Security → Developer Mode

Switch it on, tap **Restart**

Tap **Turn On**, then enter your passcode

Step 8 · Set up SideStore

- Open **LocalDevVPN** and make sure it says **Connected** (tap **Connect** if not).
- Open **SideStore**. When it asks to find devices on your local network, tap **Allow**. Allow notifications too.
- Go to the **Settings** tab inside SideStore and **sign in with the same Apple ID** you used in iloader.
- Go to the **My Apps** tab and tap the **7 DAYS** button next to SideStore. Wait a moment.

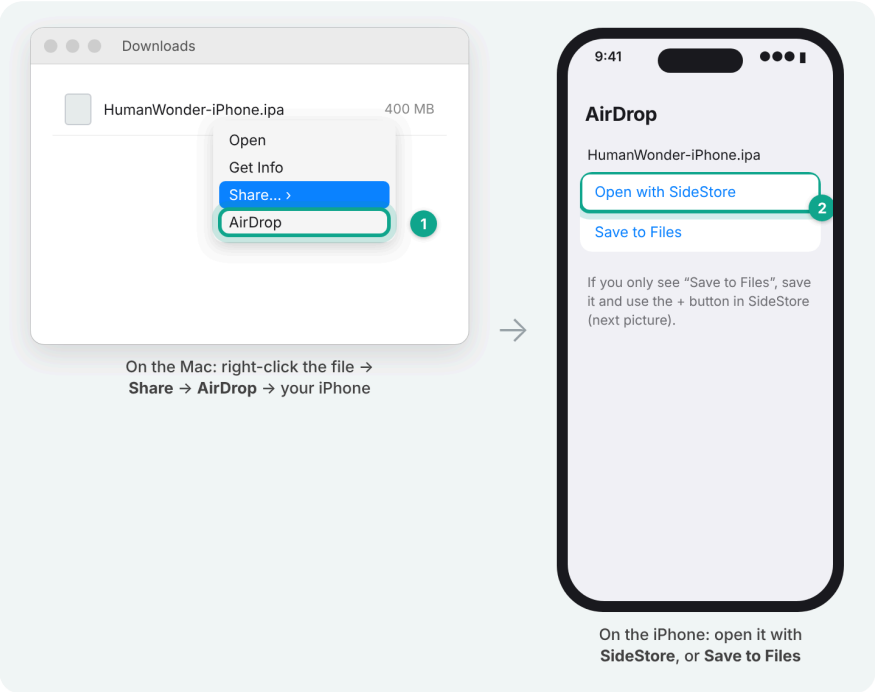

✅ **It worked when** the button next to SideStore still says **7 DAYS** after a moment and no error appears. **You can unplug the cable now.** You won't need the Mac again for normal use.

Part 4 · Install Human Wonder (5 minutes, no cable)

Step 9 · Put the file on the iPhone

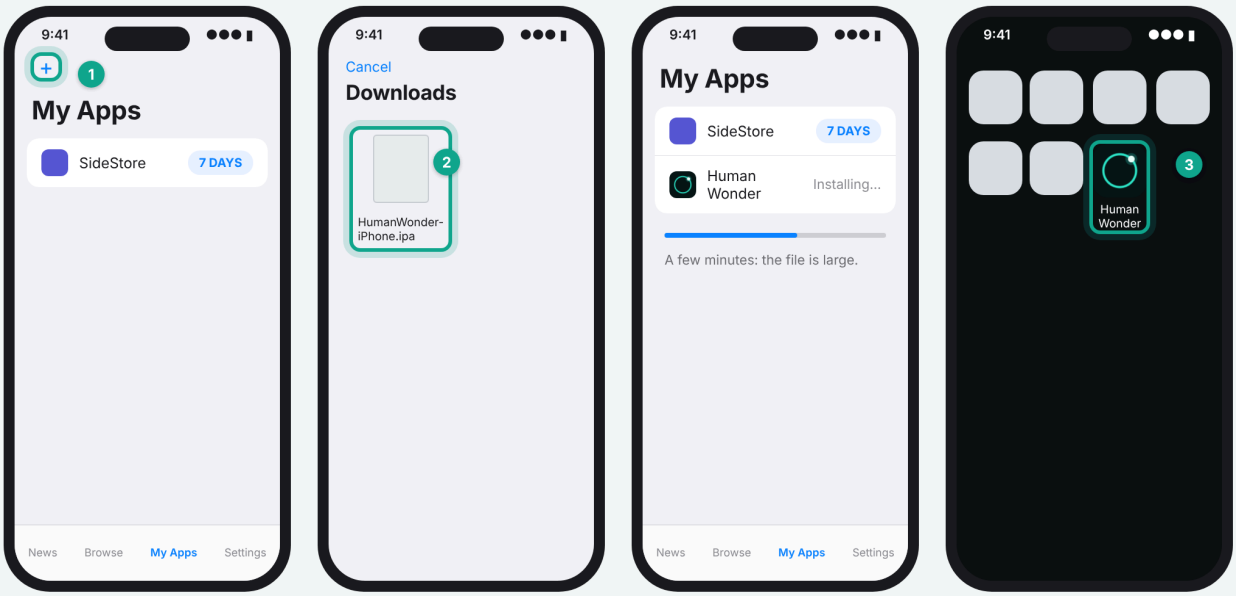

Use whichever is easier:

- **From the Mac with AirDrop:** right-click **HumanWonder-iPhone.ipa** → **Share** → **AirDrop** → your iPhone. On the iPhone, choose **Open with SideStore** if it offers it, otherwise **Save to Files**.
- **From a link we sent you:** open the link on the iPhone and save the file to **Files**.

Step 10 · Install it with SideStore

- Check that **LocalDevVPN** says **Connected**.
- Open **SideStore** → **My Apps** → tap **+** at the top left.
- Choose **HumanWonder-iPhone.ipa** (look in **Downloads** in the Files window).
- Wait while it installs. The file is large, so this takes a few minutes. **Keep SideStore open until it finishes.**
- Open **Human Wonder** from your Home Screen.

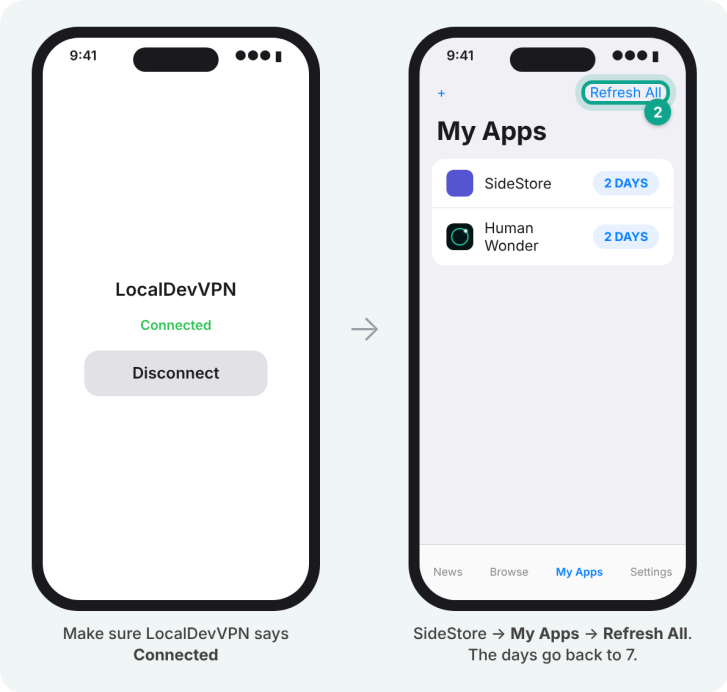

LocalDevVPN on. In **My Apps**, tap **+** | Choose **HumanWonder-iPhone.ipa** | Wait while it installs | Open **Human Wonder** from the Home Screen

✅ **It worked when** Human Wonder opens and greets you. The first start can take a little longer while it gets ready. After that, it works **without internet**.

Keeping it working (once a week, 30 seconds)

Apps signed with a free Apple ID last **7 days**. SideStore renews them by itself in the background when LocalDevVPN is connected and the iPhone is on Wi-Fi. To be safe, once a week:

- Open **LocalDevVPN** → it should say **Connected**.
- Open **SideStore** → **My Apps** → tap **Refresh All**. The days go back to 7.

Make sure LocalDevVPN says **Connected**

SideStore → **My Apps** → **Refresh All**. The days go back to 7.

Good to know:

- **New versions:** when we send you a new `.ipa`, just do Part 4 again. It replaces the old version and keeps your conversations.
- **If SideStore itself ran out and won't open:** do Step 5 again on the Mac with the cable. Your apps and conversations stay.
- **Free Apple ID limits:** up to **3 apps** installed this way at the same time (SideStore counts as one), and up to **10 new app installs per week**.

If something goes wrong

What you see	What to do
iloader: "Failed to fetch URL Bag", or another network error when signing in	Turn off any VPN or firewall app on the Mac, or connect the Mac to a different network (your phone's hotspot works), then sign in again.
iloader doesn't show your iPhone	Unlock the iPhone, tap **Trust**, try another cable or USB port.

What you see	What to do
iPhone: "Untrusted Developer"	Do **Step 6**.
iPhone: "Developer Mode required"	Do **Step 7**.
SideStore can't install or refresh	Open LocalDevVPN and tap **Connect**, check you're on Wi-Fi, try again.
SideStore: "Maximum number of App IDs"	You've reached the free weekly limit. Wait a few days, or delete an app you installed with SideStore more than 7 days ago.
Human Wonder opened before but now closes straight away	It ran out: connect LocalDevVPN and tap **Refresh All** in SideStore.
Still stuck	Take a screenshot (side button + volume up) and send it to the person who sent you this guide.

About your Apple ID

iloader and SideStore use your Apple ID only to ask Apple to sign apps for **your own** iPhone. Everyone uses their own Apple ID. Human Wonder itself never asks for an account and works offline.
